MOHAMED GAMAL ABDELRAZEQ

Senior Full Stack Software Engineer

Cairo, Egypt | +20 110 174 0864 | mohamedelsonny5@gmail.com
linkedin.com/in/mohamedelsonny8 | github.com/mohamedElsonny

PROFESSIONAL SUMMARY

Senior Full Stack Software Engineer with 7+ years of experience building production web products, APIs, cloud services, and data pipelines. Strong in TypeScript, Node.js, React, GraphQL, PostgreSQL, AWS, and GCP, with hands-on experience in backend architecture, event-driven workflows, real-time systems, legacy migrations, CI/CD, and reliable integrations.

CORE SKILLS

Languages: TypeScript, JavaScript, Go
Frontend: React, Next.js, Vite
State Management and Client Data: Redux, Zustand, MobX, React Query, Apollo Client
Backend and APIs: Node.js, Express.js, NestJS, GraphQL, REST APIs, tRPC, Gin
Testing: Jest, Vitest, Supertest, Playwright (end-to-end testing)
Data, ORMs, and Messaging: PostgreSQL, Redis, Prisma, TypeORM, DynamoDB, Firebase, Supabase, RabbitMQ
AWS: SES, S3, SQS, Lambda, API Gateway, ECS, RDS, Amazon CloudWatch
GCP: GKE, Cloud Run, Cloud Build, Pub/Sub, Vertex AI, Gemini
DevOps: Git, Docker, Kubernetes, CircleCI, CI/CD, Nginx
Architecture: Microservices, Event-Driven Systems, SSE, WebSockets
Identity and Integrations: OAuth 2.0, OpenID Connect, Auth0, Stripe, Webhooks, Salesforce, SAP, Web3, OpenSea, Tekla PowerFab

PROFESSIONAL EXPERIENCE

Independent Software Engineer (Contract)

Selected Client Projects | Remote | Mar 2024 - Present

- Delivered full-stack products across real estate, wellness and digital publishing, industrial logistics, and waste management.
- **GetRidley:** Designed and built a seller inbox that brings inbound emails and website messages into one workflow using TypeScript, Node.js, React, AWS SES, S3, SQS, Lambda, DynamoDB, and API Gateway WebSockets.
- Kept large email bodies and attachments in S3 while SQS carried small references for reliable processing. Added Amazon CloudWatch monitoring and email alerts for service failures.
- Completed GetRidley's core release in 2 of 4 planned weeks, then used the remaining 2 weeks for testing and fixes; later delivered a new onboarding flow and dashboard.
- **Digital Library:** Built a yoga website and digital book library with React, TypeScript, and Firebase. Integrated an AI assistant using Vertex AI's managed indexing and Gemini.
- **CheckSammy:** Built Next.js frontend features that used the product's existing Python APIs. Traced a post-mutation stale-data flicker to delayed read updates and proposed an optimistic UI update that was adopted and resolved the issue; also contributed through peer code reviews.
- **P2 Programs - STSX Steel Tracking System:** Developed a Go and PostgreSQL integration with Tekla PowerFab, including barcode workflows for material sequences, lots, and piecemarks.
- **RandomMath:** Built a role-based quiz platform with Next.js, Drizzle ORM, PostgreSQL, Docker, Nginx, and DigitalOcean.

PROFESSIONAL EXPERIENCE - CONTINUED

Backend Software Engineer | Mozare3

Cairo, Egypt | Oct 2023 - Mar 2024

- Led a gradual migration from Kissflow to TypeScript and Node.js services on AWS ECS while the existing field-visit system remained available. Implemented proactive monitoring and alerting with Amazon CloudWatch, including email notifications for operational failures.
- Used Kissflow's private API to read the legacy structure, then built metadata-driven TypeScript scripts that generated matching PostgreSQL tables on Amazon RDS and migrated the full database within one week. Added scheduled idempotent sync with record matching, upserts, retries, and circuit breakers.
- Moved visit logic and Salesforce integration behind one API through API Gateway and ECS. The same contract supported Kissflow forms and the Flutter application, and two visit flows were delivered end to end. Also built scheduled SAP reports in TypeScript.

Software Engineer (Backend & Architecture) | Syft.la

Remote (USA-based) | Dec 2018 - Oct 2023

- Started in backend engineering and later owned backend and cross-stack architecture, setting technical standards and contributing hands-on or through implementation reviews across critical GraphQL, client caching, real-time subscription, chat, and payment flows.
- Used Express.js early at Syft, then built key platform features with NestJS, React, GraphQL, and Prisma, including campaign workflows, Stripe payments and webhooks, and real-time chat.
- Built a shared adapter layer for Facebook, TikTok, YouTube, and Twitch, normalizing each provider into one internal analytics model and keeping provider-specific logic outside the main service.
- Improved GraphQL performance with request-scoped DataLoader batching across database queries and downstream services, reducing N+1 resolver fan-out. Also defined Apollo Client cache and query-shaping practices.
- Cached influencer metrics computed by a separate service in Redis and optimized the frontend, reducing page-load time by an estimated 50%+ on key pages.
- Worked on a separate authentication service using OpenID Connect and the OAuth 2.0 Authorization Code Flow, then moved identity management to Auth0 while keeping the same application flow.
- Built Mynt's ingestion pipeline with reusable adapters for 5+ blockchains, including Solana and Ethereum, and three external APIs, including OpenSea.
- Scheduled jobs published work to RabbitMQ to isolate provider failures and absorb bursts. Idempotent Node.js consumers processed several hundred to about 1,000 updates per day, with higher peaks, using retries, dead-letter queues, and circuit breakers.
- Chose Server-Sent Events instead of WebSockets for Mynt's one-way live feed of NFT, transaction, and analytics updates, keeping the design aligned with the read-only flow.
- Designed the CI/CD workflow from scratch, connecting GitHub and CircleCI with Google Cloud Build and GKE across separate development, staging, and production environments.
- Ran core containerized workloads on GKE and selected stateless services on Cloud Run, using Pub/Sub to separate asynchronous work from application services.

EDUCATION

B.Sc. in Mathematics and Computer Science
Helwan University | Cairo, Egypt | 2018
